

Introduction

Ensuring that Acota's impact on the environment, together with that of our industry, is minimised is an integral part of the Company's business activities and strategies.

Acota has long recognised the necessity for responsible environmental management and conservation of resources. Acota has also recognised the global nature of environmental matters and the importance of constructive cooperation in achieving international environmental conservation. Acota will continue to demonstrate leadership through our commitment to environmental management and the principles of sustainable development.

We are committed to research and development of processes, which can help reduce our industry's impact on the environment and the effect which current processes may have on the people who operate them. The Company takes account of all relevant regulations and continuously analyses its practices, processes and products to reduce their environmental impact and works with its customers and suppliers to achieve a high standard of product stewardship. The commitment of the Company is to operate, wherever possible, to standards higher than those required by law, codes of practice and issued guidelines. The development of sustainable environmental policy and practice is supported throughout the Company.

Past Environmental Achievements

Acota has been instrumental in helping many large companies reduce the environmental impact of their cleaning and coating operations. The Company was one of the first in the world to offer a viable alternative to the use of CFC's in the cleaning of precision components.

Acota developed the Certonal coating process for electronics protection, which eliminates the use of environmentally damaging volatile organic compounds.

The Company has implemented a scheme to recover and recycle more than 95% of the benign non-hazardous carriers used in the formulation of its coating materials and has also redesigned its coating application equipment to reduce its energy consumption. Recyclability of products, the reuse and utilisation of waste generated and safe responsible handling of waste are all being constantly monitored and improved. The Company uses recyclable packaging materials.

Environmental Policy

Policy Statement

We will continue to recognise and exercise our responsibility to:

- Solve our own environmental and conservation problems.
- Develop products that support a sustainable environment.
- Prevent pollution at the source, wherever, and, whenever, possible.
- Conserve natural resources through the use of optimised manufacturing operations, reclamation and other appropriate methods.
- Assure that our facilities and products are in compliance with applicable national, regional and local environmental requirements, and in conformance with other applicable environmental obligations.
- Assist, whenever possible, governmental agencies and other official organisations engaged in environmental activities.
- Foster continual improvement through company and employee initiatives.

Future Objectives

Acota continues to develop new materials with the aim of improving reliability of customer products whilst reducing the overall environmental impact of the processes used by our industry.

Dated 15/11/2017

Steve Henly
